1. The Wissenschaftlich-Technisches Büro, Warnemünde, is planning shipyards designed for building only one type of ship, a "torpedo cruiser" of 3,000 to 3,500 tons, similar to ships used by the French and Italian navies. This ship is to be armed with eight 6-inch guns and with torpedo tubes. Its length will be 420 feet and its speed 40 knots. It will have twin-screw drive, two boiler rooms, and two turbine rooms. In each boiler room two Wagner high-pressure steam boilers with following characteristics will be installed: steam pressure, 70 atmospheres overpressure (überdruck); steam temperature, 400 to 425 Centigrade; steam generated, 100 t/h.
2. These yards are to be built on the Black Sea, the Baltic Sea, the Arctic Ocean, and in the Far East. Each shipyard will be capable of constructing twenty-five ships per year.
